

Technical Analysis

Price outlook for Gujarat-ICS-105, 29mm and ICE cotton futures for the period 01/12/2020 to 31/12/2020

(The author is Director of Commtrendz Research and the views expressed in this column are his own and the author is not liable for any loss or damage, including without limitations, any profit or loss which may arise directly or indirectly from the use of following information.)

We will look into the Gujarat-ICS-105, 29mm prices along with other benchmarks and try to forecast price moves going forward.

As mentioned in the previous update, fundamental analysis involves studying and analysing various reports, data and based on that arriving at some possible direction for prices in the coming months or quarters.

Some of the recent fundamental drivers for the domestic cotton prices are:

fel1 Cotton futures marginally lower due to weak demand from millers on the back of high prices. A duty cut in edible oils further dented sentiment. However, robust export demand and increasing world cotton consumption and crop damage are expected to keep prices underpinned, despite rising cotton arrivals in the physical market.

- Parts of cotton growing regions in Maharashtra and Gujarat have faced pinkbollworm infestations in cotton crop, which have dented the crop outlook. On the other hand, the ongoing farmers' protest has impacted the cotton arrivals in North India triggering a surge in prices. Rains, pest infestations and North India's farmers' agitation has temporarily pushed up prices in the domestic market.
 - · Earlier this month, CAI had projected India's cotton exports to touch 60 lakh bales for the season 2020-21, about 20 per cent higher from 50 lakh bales estimated for the previous season. India's cotton production in 2020-21 is expected to be flat compared with the previous year, but heavy rains in Central and Southern India are expected to affect cotton quality and overall yields, the

says in a note. It forecasts production of 29.3 million bales (480 pounds) in the current year.

Some of the fundamental drivers for International cotton prices are:

 ICE cotton futures rose on Friday, supported by a strong weekly export sales report from the US government and a sagging dollar.

Shri Gnanasekar Thiagarajan Director, Commtrendz Research

COTTON STATISTICS & NEWS

The US Department of Agriculture's weekly export sales report showed net sales of 354,700 running bales (RB) for 2020/21, up noticeably from the previous week and up 84% from the prior 4-week average.

- The dollar index slipped to a near three-month low against its rivals. A weaker greenback makes cotton less expensive for buyers of the natural fibre in other currencies. The mood in the wider financial markets remained upbeat on optimism around an economic rebound next year, fuelled by COVID-19 vaccine progress.
- ICE Futures started 2020 on the current highs for the year, with both the December 20 and March 21 contracts registering their highs of 73.00 and 73.57 on January 13, before both contracts hit lows on April 2 of 50.18 and 51.64 respectively, at the point of peak concern for the pandemic. There are a number of reasons for this, but there are perhaps two main factors. First is the amount of speculative/investment money that is floating around due to the stimulus. Funds have driven the market higher and faced little resistance until the market approached the 70 cent level. The second factor has a more fundamental support to it and that is that some of the world's major cotton producers have had problems with their crops, resulting in millions of bales being wiped from the balance sheets.

Guj ICS Price Trend

As mentioned in the previous update, we expected the rebound to have the potential to turn into a strong upward move in the coming sessions. After coming close to 12,000, prices are now struggling and this makes us believe that we could see a corrective dip to 11,000 levels. Subsequently, we can expect more upside again.

MCX Dec Contract Chart

The MCX benchmark Dec cotton moved higher as expected. As anticipated, we saw a test of 20,000 levels on the upside. We can now expect prices to dip towards 19,000 levels and failure to sustain here, could see more downside to 18,300-500, where strong support sets in. An unexpected rise above 20,500 could result in a sharper rally higher again which is not our favoured view.

Revision in Testing Charges at CAI Laboratories

The following are the charges for cotton testing in the laboratories of the Cotton Association of India with effect from 1st October 2020.

Particulars	Per S	ample Testing Fees	in Rs.
	Testing Fees	GST	Total
HVI Test	145	26	171
Micronaire Test	85	15	100
Colour Grade on HVI	85	15	100
Gravimetric Trash Test on HVI	85	15	100
Moisture	85	15	100
Grading (Manual Classing)	235	42	277

VOLUME BASED DISCOUNTS

Particulars	Per S	ample Testing Fees	in Rs.
	Testing Fees	GST	Total
For 250 samples and above but less than 500 samples	140	25	165
For 500 samples and above but less than 750 samples	135	24	159
For 750 samples and above but less than 1000 samples	130	23	153
For 1000 samples and above but less than 2000 samples	125	23	148
For 2000 samples and above but less than 5000 samples	120	22	142
For 5000 samples and above but less than 10,000 samples	115	21	136
For 10,000 samples and above	100	18	118

The fees under the above volume based discount scheme is payable within 15 days from the receipt of the invoices to be raised on monthly basis.

We would also like to inform that the parties can avail the benefit of testing of cotton at multiple laboratories of the Associations against the CAI Credits made by them.

We earnestly request you to avail the facility of testing at the Association's laboratories.

COTTON STATISTICS & NEWS

We will also look at the ICE Cotton Dec futures charts for a possible direction in international prices.

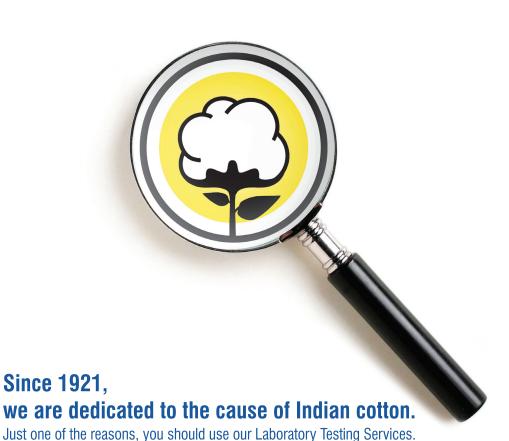

As mentioned before, price could gradually grind higher towards 71c again or even higher. Presently, while 70-71c holds, we can expect a rally higher to 74-75c in the coming sessions. Chances exist even for an extension to 78c on the upside. However, any unexpected fall below 69c could turn the outlook from neutral to bearish. Such a fall could see a dip to 65-66c subsequently.

CONCLUSION:

The domestic prices are hinting at more downside while the international prices are still showing promise. International cotton futures still continue to display strong bullish tendencies for the time being. The domestic prices are inching lower after a bout of profit-booking, and could grind lower again from present levels. Although there could be upticks from time to time, the domestic prices might find it tough to rise compared to the international markets. The international price indicates mild positive momentum in the short-term, while medium-term still looks bullish. We believe price could get supported around 71c range and gradually edge higher to the levels mentioned above.

For Guj ICS supports are seen at 11,000-11,200/qtl followed by 10,700 /qtl, and for ICE Mar cotton futures at 71c followed by 67c. The domestic technical picture looks weak, and the international prices are relatively bullish compared to the domestic prices. We expect domestic prices to edge lower slowly from current levels. Therefore, though we expect more bullishness ahead in international markets, domestic prices might struggle to cope up with it.

The Cotton Association of India (CAI) is respected as the chief trade body in the hierarchy of the Indian cotton economy. Since its origin in 1921, CAI's contribution has been unparalleled in the development of cotton across India.

The CAI is setting benchmarks across a wide spectrum of services targeting the entire cotton value chain. These range from research and development at the grass root level to education, providing an arbitration mechanism, maintaining Indian cotton grade standards, issuing Certificates of Origin to collecting and disseminating statistics and information. Moreover, CAI is an autonomous organization portraying professionalism and reliability in cotton testing.

The CAI's network of independent cotton testing & research laboratories are strategically spread across major cotton centres in India and are equipped with:

- State-of-the-art technology & world-class Premier and MAG cotton testing machines
- ₩ HVI test mode with trash% tested gravimetrically
